

**New compact simultaneous compact hydraulic power unit  
by LANCIER Hydraulik**

The latest development by LANCIER Hydraulik combines the advantages of simultaneous hydraulic power units and compact hydraulic power units. Saving about ten percent weight, the new pump LH-PU-MTO/C is almost as powerful as its larger sibling. Thus providing easier storage and transportation.

The compact hydraulic power unit is designed for the direct connection of two rescue tools. The capacity of the reservoir allows for operating two of the largest tools of the LANCIER Hydraulik program as there are spreaders, cutters, combi tools, rams etc. It will be delivered ready for use with automatic locking, flat face quick connect couplings and filled with oil.

The LH-PU-MTO/C can be purchased with carburettor engine or electric motor.

**Technical Data**

Hydraulic power unit	LH-PU-MTO/C-G
Operating pressure	630 - 720 bar
Oil flow, pressure	2 x 2,0 l/min / 180 bar 2 x 0,75 l/min / 720 bar
Power unit	4-Takt-Vergasermotor
Power	2,15 kW
Length / Width / Height	330 / 345 / 465 mm
Weight approx.	30 kg

21. September 2007
