**New hose concept by LANCIER Hydraulik
saves weight and space**

LANCIER Hydraulik reduced the diameter of their new high pressure twin line hoses, thus providing a weight reduction of about 50 %. A great benefit to rescuers when carrying the equipment.

Additionally to the weight reduction the new hoses are much more flexible than the regular ones. This allows for smaller bending radii and easier handling of the unrolled hoses.

Due to these attributes LANCIER Hydraulik was able to minimize all hose reels in diameter (less 24 %) and width (less 32 %). So the confined spaces in rescue vehicles is utilized in a much better way.

The weight of a complete hose reel equipped with 20 m high pressure twin hoses is reduced about 45 % to only 8.8 kg

18 October 2007

GmbH & Co. KG

The new red hose reel from LANCIER Hydraulik saves about 45 % weight and space.

The new flexible high pressure twin hoses from LANCIER Hydraulik weigh about 50 % less and allow for very small bending radii.
